Match events

Seasons, matches, season passes and printed season tickets: what we agreed in the brainstorm, and the order we'll build it in.

How it fits together

Season

A new activity type, like raffles and sales. It holds the competition or league, the sport, the default home venue, a cover, a description and the season pass types. It has its own public page listing all its matches.

Match

A normal physical event linked to a season, plus the home and away teams (name and logo) and the matchday or round. It has its own ticket types and prices, like a basic event. It starts with the season's venue, which the organiser can change per match. Matches can be added during the season. No places integration for now: the venue is typed in.

Season pass

One QR code that works at every match of the season, including matches added later.

- Several pass types per season (e.g. "Pass Tribune", "Pass VIP"), each with its own price and quantity.
- Each pass type is linked, per match, to one of that match's ticket types. Every pass sold takes a seat from that ticket type at every match, so a match can't be oversold.
- On sale at a fixed price until the last match.

Printed season ticket

Belongs to the season and a pass type (category).

- The first scan at a match locks it to that match.
- It can check in and out as many times as needed during that match.
- Once that match ends, the ticket is void.
- A ticket that was never scanned stays valid for a later match.
- It doesn't count against capacity, same as printed tickets today.

Money and changes

Payout, per match played

Pass money stays pending. Each time a match ends, the season's pending pass money is divided by the number of matches still to play (counting the one that just ended) and that share is released. The last match releases whatever is left. This handles matches added or cancelled mid-season.

Pass returns

Full refund to the wallet, only before the season's first match starts. No returns after that.

Postponed or cancelled match

- **Postponed:** new date; every ticket and pass stays valid.
- **Cancelled:** single-match tickets are refunded as today. Pass holders lose that match, and its share of pass money moves to the remaining matches.

Season pass extras in the first version

Discount codes, ticket returns, transfer/gift and rewards.

Build phases

1. **API**: season tables (season, pass types, links between pass types and match ticket types), match fields, season and match create, edit and approval.
2. **Organisation dashboard**: create a season, add matches pre-filled from it, sell single-match tickets like a basic event, check in with the existing scanner.
3. **Attendee web**: season page, match page ("Home vs Away", competition, matchday), Explore filter by sport, single-match checkout.
4. **Season passes**: pass types and their per-match links, the capacity reservation, checkout, the pass in My tickets with one QR, scanning passes at the gate.
5. **Printed season tickets**: admin prints batches per season and pass type; lock and void rules in the scanner.
6. **Money**: per-match payout, pass returns, match cancel and postpone.
7. **Pass extras**: discount codes, rewards, transfer/gift.
8. **Mobile app**: season and match pages, buying, passes in the tickets tab.
9. **Admin**: season and match review, views of passes and printed tickets.

Phases 1–3 already give working single matches. Season passes come after that.

Still open

1. **Figma:** are there frames for the season page, match page, create flow and pass?
2. **Transfer/gift:** no ticket can be transferred today. Simple version (the holder enters the recipient's email and the pass moves to their account)? Can a pass still be transferred after it has been used?
3. **Rewards:** the rule is "one reward per event". Should a season pass earn one reward for the season?
4. **Home team:** always the organiser's own team, or can an organiser (e.g. a league) sell matches between two other teams?
5. **Away matches:** show them on the season page as fixtures without tickets, or only matches that sell tickets?
